

ADMIN CHEAT SHEET · RUN THE NIGHT

The site always shows the newest match day you created. Old matches never remove themselves — creating the next match day replaces them instantly. The football API never loads matches; it only fills in results automatically for fixtures you entered with a match ID. Everything happens at quarrysportsbar.com/admin.html — Unlock must show ✓ first.

THU / FRI SET UP (5 MIN)

1 Admin → key → **Unlock** → wait for ✓ **key verified**.

2 §2 Create the match day — date + first kickoff, fixtures one per line:

```
League | Home | Away | HH:MM | match_id
Premier League | Arsenal | Everton | 13:30 | 537214
```

3 The last number (optional) makes results automatic. Without it, type results in §5 on the night.

4 Create week → replaces old match day at once (teaser). **Open entries** when ready — Friday morning.

5 §3 Issue codes (e.g. 60) → print → waiters hand one per ₦5,000+ spend. Valid this match day only.

FIX-ITS WHEN SOMETHING'S OFF

✗ **Key rejected** — wrong key or ADMIN_KEY missing in Netlify. Nothing works until ✓.

? **"Code not found"** — code from another day or never issued. Check §1, reissue §3.

☎ **Lost slip** — §4 lookup by phone number.

± **Result wrong / missing 10+ min** — §5 set by hand. Postponed → Void.

MATCH DAY THE NIGHT ITSELF

All day	Codes out with ₦5,000+ spend. Picks close at first kickoff ; numbers 6:30pm — both automatic.
6:15pm	Big screen → /draw.html — countdown and show run themselves.
6:30pm	§6 Commit draw . Seals the result, publishes the fingerprint. Nothing can change it after this.
7:00pm	§6 Reveal draw . Bingo show plays; output box names winner(s) + winning ball.
After draw	§7 Record winner — Bingo · 20000 · consent tick if photo OK. Pay at the bar.
Full time	Results fill in ~2 min after each final whistle (with match IDs). Leaderboard scores itself.
Last whistle	Top score wins. §7 Record winner — Match Picks · 50000 . Pay same night.

Never re-run a draw. Commit and Reveal each work exactly once per match day — the system refuses a second try, on purpose. Something looks wrong? Stop and check before recording a winner.

API TEST ONCE, IN TERMINAL

```
curl -s -H "X-Auth-Token: YOUR_KEY" \
  "https://api.football-data.org/v4/competitions/PL/matches?dateFrom=2026-08-22&dateTo=2026-08-23"
```

JSON with **"matches"** = key works; each match's **"id"** is what you paste in §2. Leagues: PL · ELC · CL · PD · SA · BL1 · FL1. Sync runs every 2 min, 12pm–11pm, only while the week is open or live.
